WHAT GOOGLE SCOUT SHOWS YOU

Shadow IT Detection

Every third-party app your users have authorized via Google OAuth, including apps IT never approved and apps connected by people who no longer work there.

User Activity

Which Google Workspace seats are active, idle, or completely unused. Export the list and cut dead spend immediately.

OAuth Permission Visibility

The exact access level every connected app holds: read-only, read/write, or full account access. Flag high-risk apps in seconds.

Multi-Tenant MSP Support

Connect multiple client Google Workspace accounts and manage everything from one BetterTracker dashboard.

HOW IT WORKS

- 1 Connect your Google Workspace admin account**
One OAuth authorization covers your entire organization. No software to install on employee devices.
- 2 Google Scout scans your environment**
Within minutes you see every OAuth-authorized app, every seat's activity status, and the permission level each app holds.
- 3 Review, flag, and take action**
Identify unauthorized apps, remove dead seats, and bring data to your next QBR with real numbers attached.

22 unknown apps. One scan.

After an employee departure, Dinn Technologies ran a Scout scan and found 22 apps their former colleague had connected, several of which the owner had never seen and could not identify. All were flagged and restricted within minutes.
